

## BRIDGEWAYS MANAGEMENT PACKS

Xandros enables IT operations to manage mission critical applications across heterogeneous environments from a single console, by using BridgeWays Management Packs for Microsoft System Center Operations Manager 2007. They assure business continuity and peak performance through real time views of key performance metrics.

BridgeWays Management Packs are engineered to critical customer requirements, gained during extensive beta tests in a diversity of enterprises. Outstanding features include:

- **Model-based**

Model-based management assures rapid identification of issues affecting monitored systems and business processes.

- **Deep monitoring**

It's not enough to determine if a service is up or down: BridgeWays Management Packs drill down into the application, so that administrators can quickly identify and resolve issues.

- **Lightweight mechanism**

Our solution is engineered to have minimal impact on the system that is being monitored.

- **Unobtrusive virtualization**

Our VMWare ESX Management Pack uses an agent-less technology to communicate with the server. With no software to install or configure, it provides out of the box monitoring without touching your ESX machine.

BridgeWays Management packs support a wide range of mission-critical open source and proprietary services on Windows, Linux, and UNIX.\*

### Application Servers:

Oracle Application Server, IBM WebSphere, JBoss, Tomcat

- Administer multiple servers
- Measure server performance
- Determine application availability
- Measure key application performance metrics

### Database Servers:

Oracle Database Server, MySQL Database Server, IBM DB2, Postgres

- Administer multiple servers and databases
- Track key server performance metrics including data throughput, active connections, and cache hit ratio
- Monitor alert logs
- Reveal cpu intensive sessions
- Reveal slow queries
- Set slow query log parameters to detect and track slow queries
- Monitor table sizes and indexes

### Virtualization:

VMWare ESX

- Administer multiple servers
- Measure server performance
- Measure host and virtual machine performance
- Monitor resource capabilities and allocations

### Communication Servers:

Sendmail, Blackberry Enterprise Server, Postfix

- Administer multiple servers
- Measure server performance
- Track connection activity

### Web Servers:

Apache

- Administer multiple servers and sites
- Measure data throughput, connection metrics, and worker performance
- Detect and act upon denial of service attacks
- Track site performance and page response times
- Determine PHP availability and response times
- Track pages requested and data served to clients
- Monitor access and error logs

\* Note: Certain features in a category may not apply to every management pack.

### About Xandros

Xandros provides BridgeWays Management Packs for the Microsoft Systems Center Operations Manager that enable system administrators to monitor and manage enterprise applications on Windows, Linux and Unix from a single console. Other award-winning Xandros solutions include Linux desktops and servers, custom OEM solutions, and open calendaring and messaging. The company is headquartered in New York, with R&D offices in Ottawa, Frankfurt, Bracknell and Mumbai, and sales and support offices worldwide.
